

# Drought at Colorado River and Lake Mead

## Next Slide

A boat passes silt banks towering more than 50 feet above the banks of the Colorado River near Pearce Ferry on Aug. 1, 2018. The silt in the banks, which make the end of the Grand Canyon in Lake Mead National Recreation Area, came down the Colorado River and could not pass Hoover Dam. The banks were once underwater, but now line the river with the lake at near-record-low levels.
